Editing a room	Page 7
Adding more rooms	Page 8
Using light including; CCT, RGB, RGBW or RGBCCT in rooms	Page 9

Introduction:

This document will guide you through the process of, setting up Rooms on the Homeelife App to group receivers together.

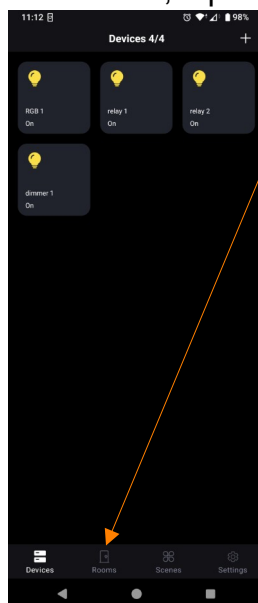

If you need to know how to download and start the Homeelife app on your mobile device, or, if you need to know how to pair a receiver with the Homeelife app or a switch plate, then please read the guide “H2A Receiver to Homeelife App or Switch Plate Programming”.

Screenshots from this guide will be from an Android device, and will work the same way for an Apple device.

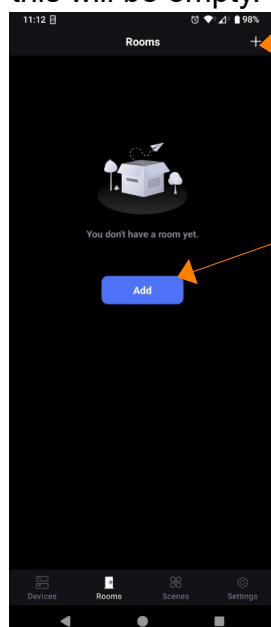

Creating a room on the app:

To start with creating rooms on the app, tap the app to open it.

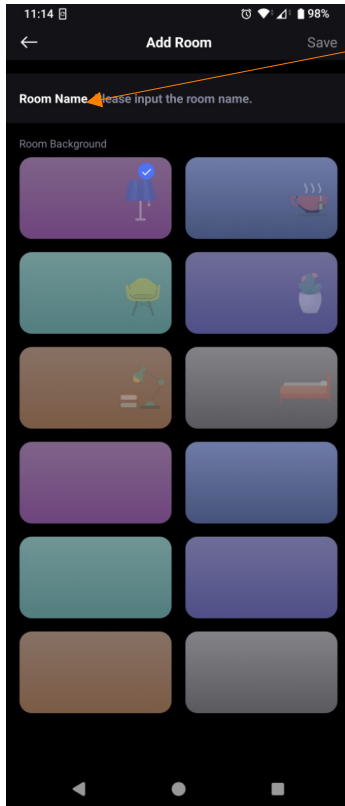

Once you open the app, the screen will show a list of connected receivers, at the bottom is tab menu, tap on “Rooms”

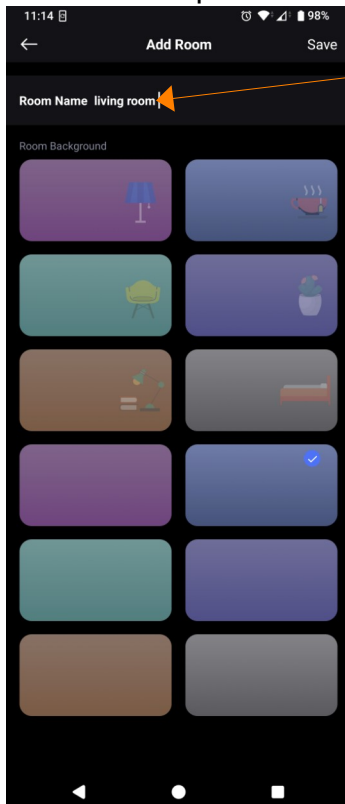

On the next screen you will see a list of rooms, if you haven't already created a room this will be empty. To create a room tap on the “+” button or tap “Add”:

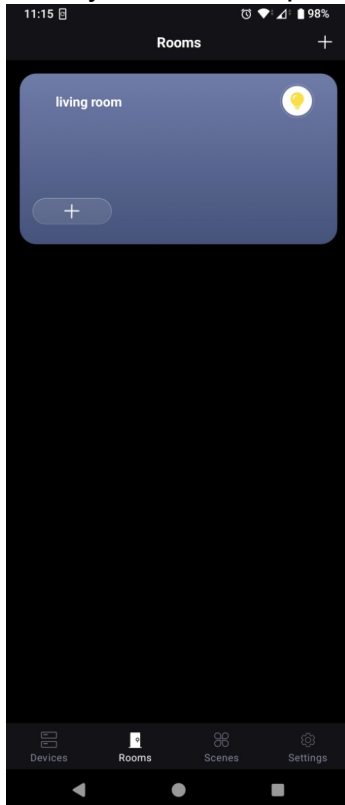

This will take you to the rooms setup tab. In this tab you can name your room and pick an icon.

For this example we are picking a plain icon and naming the room “living room”.

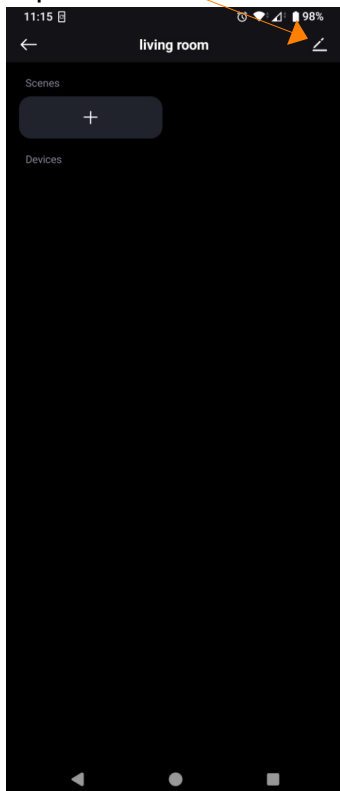

Once you have completed tap “save” and your room will be shown on the screen:

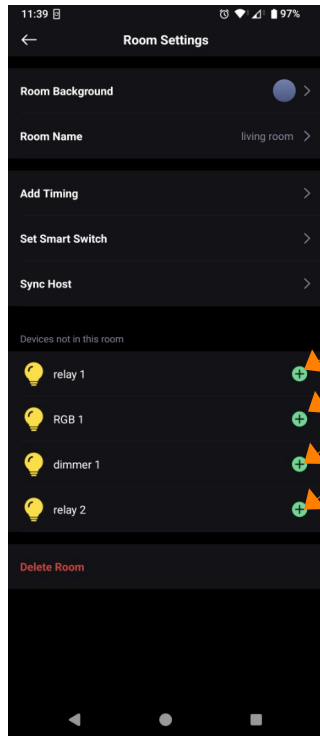

To add receivers, tap on the room icon or the “+” symbol.

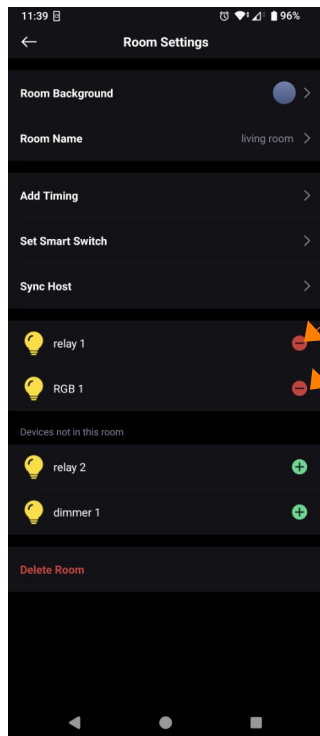

Tap on the “Edit” icon

You can now add receivers to the room by pressing on the green “+” circles.

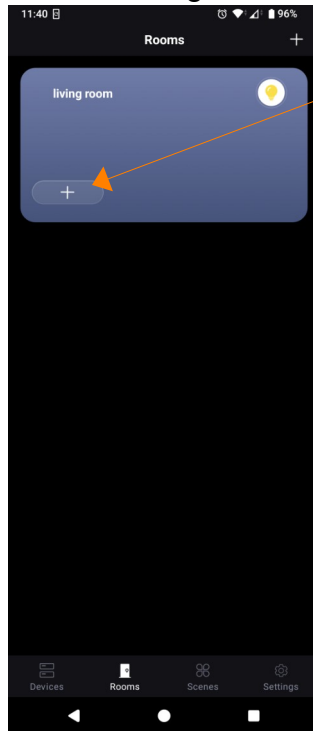

The receivers will be added to the room and show red “-” circles which you can tap to remove the receiver from the room

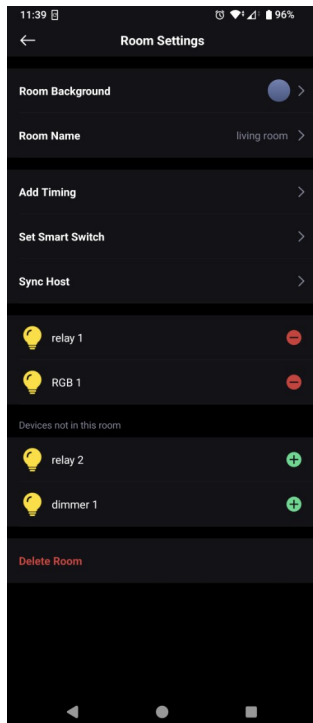

Editing a room:

To start editing a room, press the icon or “+” button the room you want to edit.

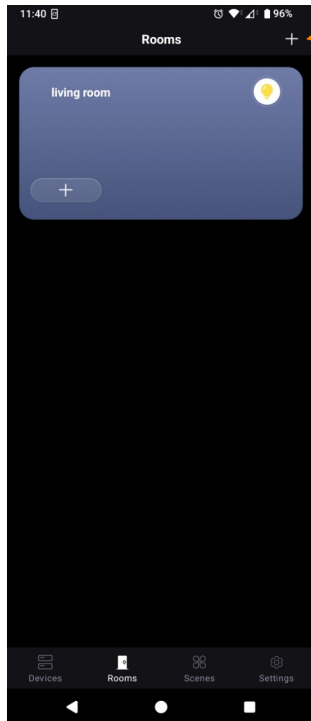

This will bring you to the room’s tab. On this tab you will see all available receivers, and some other control options for the room. To edit the receivers for a room tap the green “+” circle to add receivers, the red “-” circle to remove them from a room and the delete room, if the room is no longer needed.

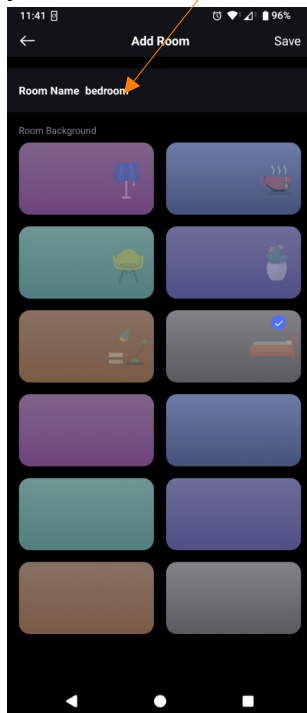

Adding more rooms:

To start adding another room tap on the “+” button on the Rooms tab

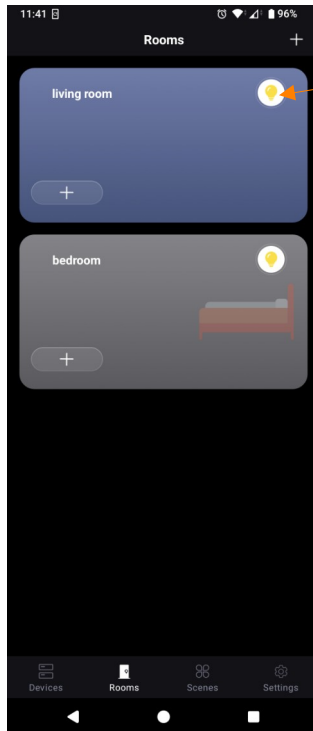

From here you can follow the steps in “Creating a room on the App” above to set up your new room

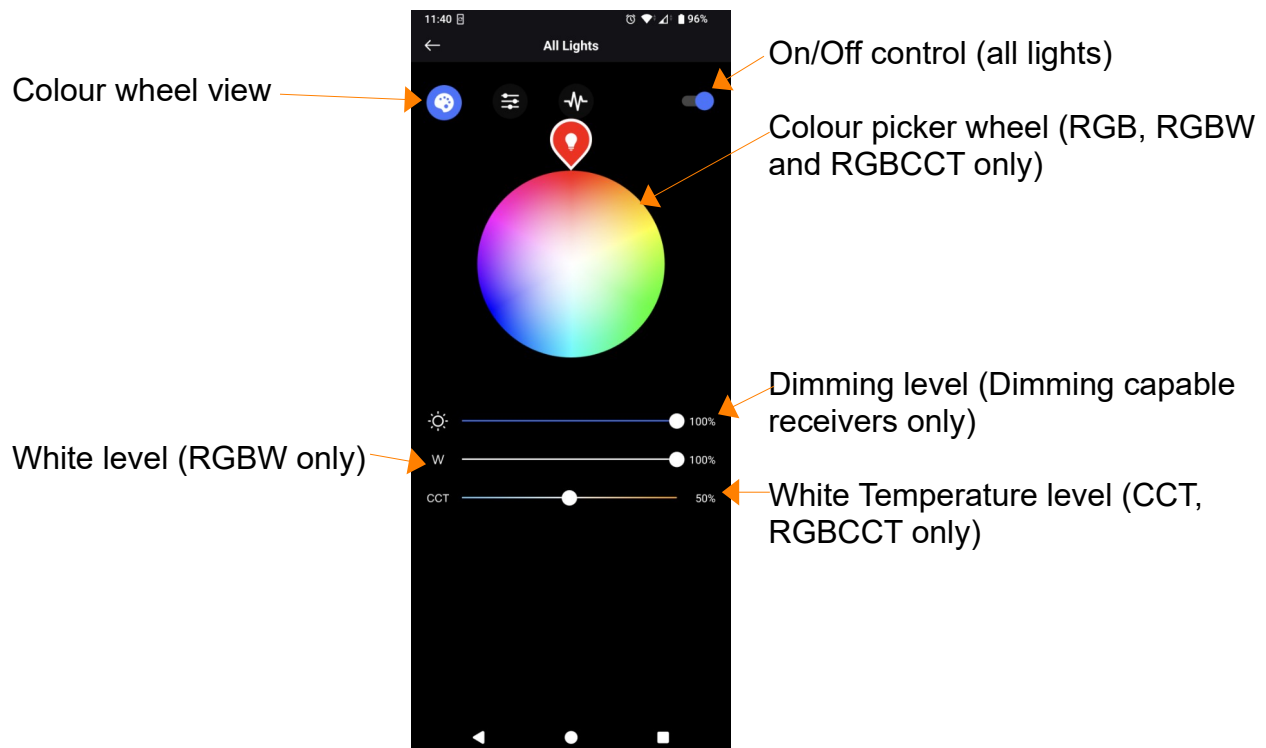

PLEASE NOTE: RECEIVERS CAN BELONG TO MORE THEN ONE ROOM

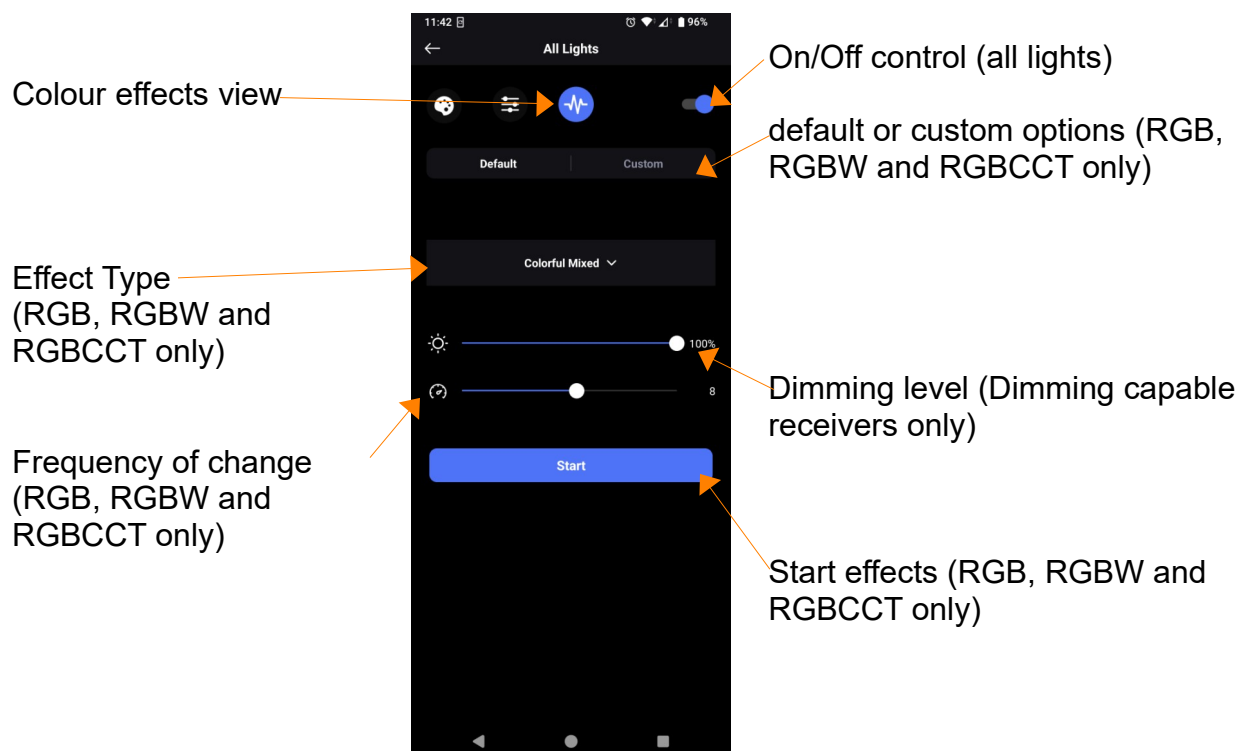

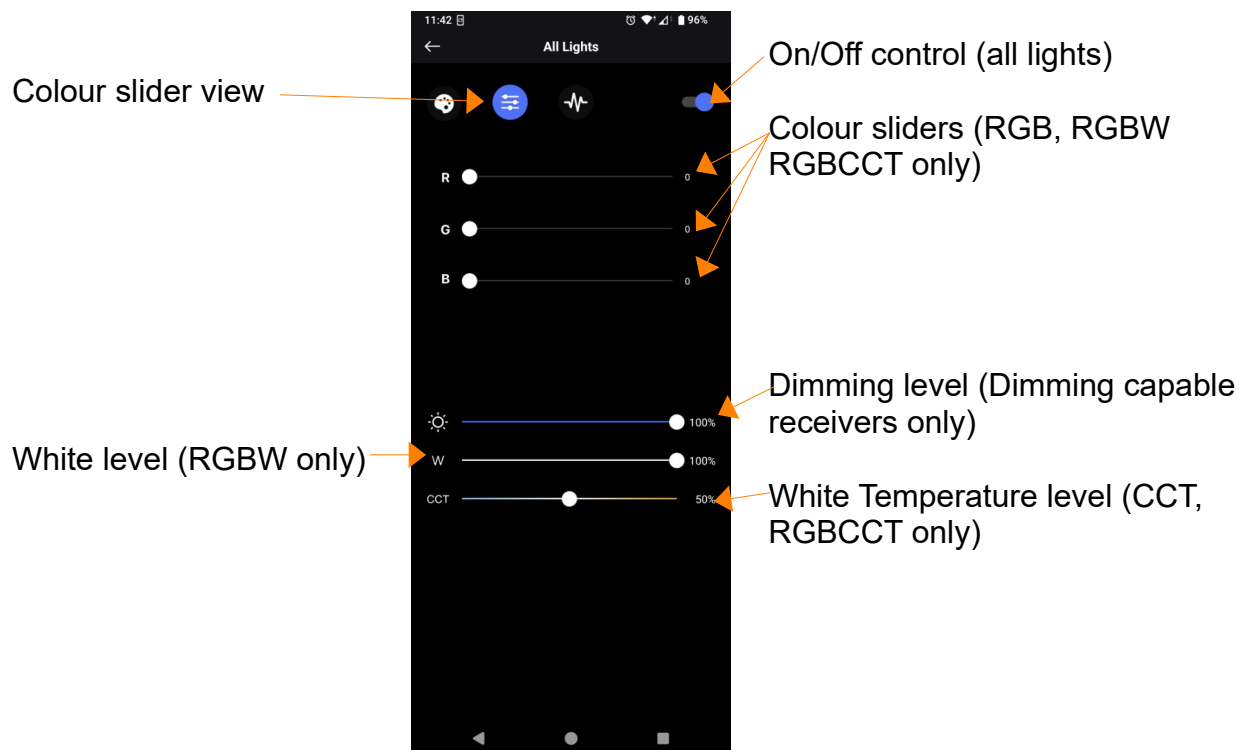

Using light including; CCT, RGB, RGBW or RGBCCT in rooms:

For a room where you want to use receiver and control the lights, tap on the bulb icon in the room you want to control.

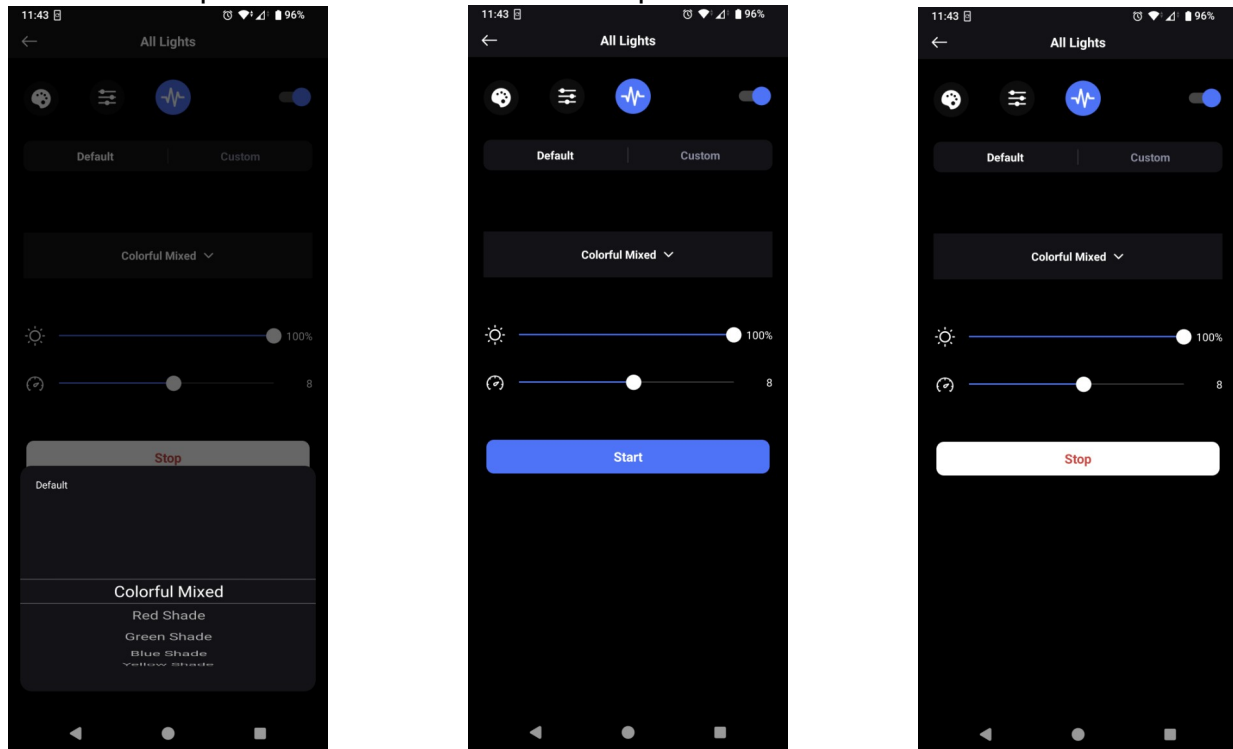

This will take you to the All Lights screen for that room. Not all options on this page will be applicable to your room. The list of options will be shown on the images below:

You can also pick RGB effects. Start and stop them as shown in the screens below:

PLEASE NOTE: IF A RECEIVER IS NOT CAPABLE OF DIMMING, IT WILL HAVE
ISSUES WHEN ATTEMPTING TO DIM
PLEASE NOTE: RECEIVERS THAT ARE NOT CAPABLE OF RGBW OR CCT COM-
MAND WILL IGNORE THEM
